LEAP DAY BY THE NUMBERS

It takes Earth **365.242 days** to orbit the sun — and those extra hours count!

When a leap year is added **every four years**, the calendar is still off by a **few minutes**.

To fix that, only centuries **divisible by 400** are leap years. That means that **1700, 1800 and 1900** were not leap years.
